The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-6 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamarauskas et al 6609929 in view of Slack et al 6736680 and Wu 6447340 and Po-Heng 6592392.

Kamarauskas et al discloses plug loading slots 14, engaging projections (unnumbered) in each slot 14 for latching an engaging lever of an inserted plug, contact pieces 42 and shield plate 12. The engaging projections are not shown as being part of the opening wall, the contact pieces are not at varying distances with respect to the cavity openings, and no convex region is shown. Slack et al discloses (see attachment) engaging projections which are part of the opening wall, and to form the engaging projections of Kamarauskas et al in this way thus would have been obvious, to better prevent plug removal. Wu discloses horizontal contacts 30,32 which are spaced at varying distances from the cavity opening, and to form the contacts of Kamarauskas et al in this way thus would have been obvious, for safety purposes. Po-Heng discloses V-shaped convex regions in the plug loading slot containing terminals 421, and to provide the plug loading slot of Kamarauskas et al with such V-shaped convex regions thus would have been obvious, to facilitate insertion of a mating connector.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kamarauskas et al in view of Slack et al and Wu as applied to claim 4 above, and further in view of Hung et al 6264501.

Kamarauskas et al in view of Wu substantially discloses the claimed invention, except for the plug loading slots being colored separately. Hung et al discloses connectors being labeled with different colors, and to color the plug loading slots of Kamarauskas et al with different colors thus would have been obvious, to prevent insertion of incorrect plugs.

Applicant's arguments with respect to claims 4 and 9 have been considered but are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary F Paumen whose telephone number is 571-272-2013. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula Bradley can be reached on 571-272-2800, ext. 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
